

## AUDAC is introducing the VEXO series

### A new stereo active loudspeaker system

Belgian pro audio manufacturer AUDAC has announced the upcoming availability of their new VEXO series. The VEXO family consists of six models: VEXO110(A), VEXO112(A) and VEXO115(A) which are available both in active and passive versions. The low frequency transducer, which is made out of high-quality materials, is combined with a 1.7" voice coil compression driver, enabling high sound pressure levels and a tight driver response with rotatable 90° x 70° coverage pattern for a wide range of applications. Optional 70/100V line transformer modules are available for the passive variants.

Due to the unique driver composition, the VEXO110 achieves a program power handling of no less than 600 Watts (300W RMS), the VEXO112 achieves 800 Watts (400W RMS) while the biggest variant in the family, the VEXO115, reaches up to 1000 Watts (500W RMS). Yet the unique character of these series lays in the creation of a high-fidelity, rich and vibrant sound.

When not in use, the active versions of the VEXO series devices automatically go into an energy-saving standby mode. This means that active versions can also be used in fixed installations, as there is no need to physically shut them down after each use.

Impact resistance is guaranteed thanks to the 12 mm plywood cabinet construction with a polyurethane coating and a DuraCoat top surface. The front side of the VEXO

is finished with a powder coated steel grill with acoustical foam, making the loudspeaker ball impact proof as well for fixed installations in indoor sport facilities.

The VEXO series comes equipped with a wide variety of mounting possibilities. They are standard fitted with a 35mm pole adapter and a large number of rigging points and holes pattern to be compatible with brackets and installation accessories. AUDAC's optional Clever U-bracket allows you to mount the high power 2-way cabinet both horizontally and vertically, while an inclination of  $-90^{\circ}$  to  $+35^{\circ}$  ensures an optimal positioning. This optional MBK bracket even permits mounting the VEXO to the ceiling which gives the opportunity to install the loudspeaker cleanly in any environment.

The active variant of the VEXO series has a wide range of inputs. When installing the ANI44XT Dante audio network interface in the active loudspeaker, you can integrate the VEXO series into any Dante™ enabled AV network and transfer digital audio with any compatible solution on the market. These active versions of the VEXO-family also feature the unique WaveDynamics™ innovation, which allows you to load in any preset for full range, satellite and custom configurations via the USB slot on the back. After which, the unique all in one system control application, AUDAC Touch, allows you to do complete equalization and create your own presets.

In addition, the installation of this unique ANI44XT ensures that the VEXO series is also TouchLink™ compatible and allows the creation of virtual zones by linking multiple VEXO's together.
