

Adamson ArrayIntelligence V1.2

Adamson announces the release of ArrayIntelligence V1.2, the latest version of our innovative loudspeaker design and control software. This update builds upon the success of ArrayIntelligence V1.1, which launched in September 2023, by introducing a range of powerful new features and enhancements designed to improve user experience and system performance.

Brian Fraser, Head of Product and Technology at Adamson, states, “We are excited to release the culmination of our development efforts with V1.2. The new features included in this release are a direct result of the further development and continuous evaluation of our existing software by Adamson’s engineering team, while taking into account the valuable feedback we receive from our user base.”

ArrayIntelligence V1.1 was a significant milestone, introducing user-focused features like a streamlined interface, a revamped Global Assign feature, addition of more loudspeaker products, and an enhanced 3D dB SPL scale. The comprehensive bug fixes also greatly improved software stability and reliability.

Key Highlights of ArrayIntelligence V1.2 include:

Adamson releases ArrayIntelligence V1.2

Donnerstag, 13. Juni 2024 19:35

- **VGt Now Included:** Adamson's new flagship line array, VGt, is now available in AI V1.2, allowing users to include it in simulations and evaluate the optimization feature. Pilot partners will be able to fully control their systems and utilize either Cardioid or Omnidirectional patterns, while also employing optimization.
- **Sub Array Optimization:** A new tool that simplifies the design and optimization of subwoofer arrays for superior sound coverage and impact. This feature allows users to automatically generate the optimal delay settings for a given horizontal subwoofer array deployment, based on a variety of user input.
- **Delta Time Simulation:** A feature that allows for precise timing adjustments and simulations, enhancing the accuracy and coherence of sound systems. This tool integrates with the real-time monitoring introduced in V1.1, providing a comprehensive solution for timing and phase alignment.
- **Multiple Bug Fixes:** Addressing and resolving various issues to provide a more stable and reliable user experience, ensuring that the software runs smoothly and efficiently.

Additional Features include a mutelock function and new buttons for better touch screen control. Inclinator accuracy has been upgraded. Four 2D SPL curves can be stored and compared. A user sheet including global device count can be printed. ArrayIntelligence V1.2 is available for download now on the Adamson website.
