

MIA Laboratories Announce "The Musiqua Series MKII Plug-Ins"

MIA Laboratories and Distribution partner Plugivity announce the availability of MIA Lab's Musiqua Red, Green, and Blue MKII plug-ins

Musiqua Red MKII is an analogue tube flavoured, single band EQ. It possesses a strong Tube flavour, boasting 31 pre-set frequency bands very familiar to Tube enthusiasts, across generations. The way that adds or subtracts colour is however more intense, while accompanied by a profound change in timbre. Its sound is of the type that the passionate Tube enthusiast lives for.

Musiqua Red MKII is destined to bring up sweet memories of historical and beloved equalizers to the older generation of sound engineers.

Musiqua Green MKII is a semi parametric EQ, delivering a fairly transparent sound with the 'transistor' flavour that is so characteristic of analogue technology. 'Colouring' choice is soft and discrete, handing over complete control of the level of 'colouring' to the user. Musiqua GREEN liberates the user by not restricting one into preset bands, therefore leaving them complete access to the full frequency range.

Musiqua Green MKII adds or subtracts colour, providing that classical, yet still so interesting, 1990's sound.

Musiqua Blue MKII is committed to deliver a digital – yet so analogue – equalisation,

with a very vivid flavour one can almost 'taste'. An exquisite EQ with 16 bands to choose from, forged from the experience gained over countless working hours on Class A analogue equipment. It allows the user to add or subtract basic frequencies without the usual digital restrictions.

Musiqua! Blue MKII boasts sound colouring options that assist the musical analogies of harmonics, while providing precise control over the intensity of these harmonic frequencies. Its coloration capability is one essential feature among many others, giving this digital tool and its user the 'magical power' to recreate the much respected and celebrated analogue sound of the pre-digital era.

What's New with MKII:

The Musiqua! tools encapsulate all the characteristics and inner workings of their analog counterparts, and provide the user with a simple way to achieve the perfect combination of tone and color.

The new MKII Series Plug-ins expand upon the original SE designs with new features, including :

- Input/Output Control
- Harmonic Distortion (Tube-Transistor-ClassA)
- A Compressor
- Right click to input values
- New Resizable GUIs
- VST3 Support
- Improved CPU Performance

Pricing & Availability:

Musiqua! Red, Green, and Blue MKII (each)

- List Price: \$49
- Introductory Promo: \$29

An introductory promotion shall be available from Tuesday May 18th, through May 23rd, 2020, at the highlighted price above.

MIA Laboratories' plug-ins are available through all reputable pro audio resellers worldwide via Plugiversity Distribution: plugiversity.com/about/dealers
