STL Tones presents the all-new pro audio mixing plugin ControlHub

Freitag, 20. Mai 2022 12:00

STL Tones ControlHub

After an extremely successful few years for the company releasing guitar based plugins such as ToneHub, AmpHub and the Tonality series, STL Tones announces their largest product endeavor in the companies history. ControlHub is an all-inclusive mixing plugin platform that allows you to load entire signal chain based expansion packs from your favorite mixers and recording studios, including Neal Avron, Mark Lewis, Machine (The Pro-ducer) & The Castle Recording Studios. ControlHub is not another channel strip plugin, but a complete emula-tion of the original hardware or software signal chain used, and is an unprecedented leap forward in algorithm advancement.

The technology behind the powerful ControlHub audio core is a hybrid engine, combining proprietary Tracing Technology and analog modeling at its finest to get the most accurate recreation of an entire hardware or soft-ware signal chain, from preamps to coloration, compressors, equalizers and limiters, with the ability to have

full control of every aspect of the signal chain within the plugin.

The ControlHub plugin, along with one free Expansion Pack valued at $49 will be available to purchase on May 27 at the special introductory price of $199.
