

Noise Engineering Incus Iteritas Alia

Modular synthesizer company Noise Engineering, known for their innovative Eurorack modules, has announced three additions to their Alia oscillator platform: Ataraxic Iteritas Alia, Cursus Iteritas Alia, and Incus Iteritas Alia. In 2023, Noise Engineering released the 10HP Alia platform, marking the return of their Iteritas oscillators. Alia launched with the famed Basimilus Iteritas firmware, along with Manis Iteritas and the new Debel Iteritas, but the team promised firmwares in the near future.

Now, Noise Engineering has delivered, doubling the number of firmwares available for Alia. Cursus Iteritas Alia and Ataraxic Iteritas Alia are revamped versions of the originals, promising to sound nearly identical to the originals with improved encoder tuning, a suboscillator output, and a performable Hold button. Incus Iteritas Alia is an all-new voice based around wavemorphing additive FM, designed for percussive and melodic sound design.

Noise Engineering announces New Alia Firmware Incus Iteritas

Donnerstag, 18. Januar 2024 12:00

Since Alia is an oscillator platform, owners of existing Alias can try out all three of the new firmwares on their modules. Firmware is 100% free and swappable at any time from the Noise Engineering Customer Portal. With six firmwares now available for the platform, the Alia is an excellent choice for those who want an incredibly diverse yet compact sound source in their system. Swappable overlays for all firmwares are also available from the Noise Engineering webshop and retailers around the world.

The new Incus Iteritas Alia is an exciting addition to the lineup, utilizing Noise Engineering's favorite synthesis tricks and techniques to create a new voice boasting a massive range of timbres. Sounds are created with a combination of additive, wavemorphing, and FM synthesis, with three different algorithms all controlled by an internal dynamics envelope. Users familiar with the Basimilus will find that Incus has a similar workflow, and while it can synthesize the best parts of a drum kit, it's also well-suited to bass and melodic duties.

As usual for their platforms, all of the new firmwares are available as paneled modules, so customers can choose the panel they prefer. Ataraxic Iteritas Alia, Cursus Iteritas Alia, and Incus Iteritas Alia are available now at the website below and at retailers globally.
