Mackie ProFXv3+

Mackie, a company with expertise in high-quality, affordable, professional audio designs, introduces the newest additions to their highly acclaimed ProFXv3 series, expanding the lineup with three new "plus" models packed with creator-friendly technology and features. Mackie's ProFX series set the standard for low noise and high performance in a portable, compact package, and ProFXv3 has defined that legacy even further, delivering stellar sound and intuitive workflow while adding a host of features that deliver professional mixing tools for live and studio. The new ProFXv3+ models give you even more of what you need to create great sounding productions, from live sound and recording to live streaming.

ProFX6v3+, ProFX10v3+, and ProFX12v3+ bring a host of new features including switchable USB recording modes, bi-directional Bluetooth audio, and a beefed up new GigFX+ effects engine with twelve upgraded, customizable effects, including Mackie's legendary EQ and one-button compression. The vibrant, full-color LCD screen enables you to easily see, edit, save, and instantly recall your preset parameters on the fly.

Capture your stream or performance at pristine 24-bit / 192 kHz quality with the built-in 2x4 USB-C audio interface. Choose from three recording modes: Standard mode captures your full mix, including GigFX+ effects and EQ. Interface mode

Tuesday, 16 January 2024 10:04

sends a clean mix with no effects or EQ, allowing you to continue your mix in your DAW software. And Loopback mode enables you to mix computer audio into your recording – ideal for video game streaming or playing music over backing tracks.

There's a wide range of inputs to connect your sources, including mic inputs featuring Mackie's acclaimed Onyx mic preamps delivering up to 60dB of gain with ultra-low noise. You've got 48V phantom power, 100 Hz low-cut filters, and Hi-Z switches to connect your instruments, as well as stereo 1/8-inch aux inputs. Monitor via headphone output, using the blend knob to mix between the direct signal and your DAW output for latency-free monitoring

Bluetooth audio? Yeah, we've got that. Bring in backing tracks wirelessly from your phone, or patch in a caller for a live presentation or podcast, with Mix Minus monitoring to prevent callers from hearing an echo. Waveform OEM recording software is included. And of course, the new ProFXv3 series gives you Mackie's legendary Built-Like-A-Tank construction, housed in a solid steel chassis with ultratough ABS side protection.

Availability beginning in the first quarter of 2024.
