

Celestion Cream DSRs

New Cream DSRs Join the Collection for Use with SpeakerMix Pro

Celestion, a manufacturer of guitar and bass loudspeakers and professional audio drivers for sound reinforcement applications, announces that the Celestion Cream is available as a Dynamic Speaker Response (DSR,) the next-generation digital speaker responses that capture the sound and feel of the speaker's dynamic, non-linear responses for even more tonal detail. All Celestion DSRs are designed especially for use with SpeakerMix Pro, the self-contained studio-grade DAW plug-in which brings ground-breaking levels of detail and stunning guitar and bass speaker tones. The complete collection of DSRs, as well as the SpeakerMix Pro plug-in, is available for download at the first website below.

Since the Celestion Cream was launched in 2015, it's been a hit with guitarists looking for vintage tones backed up with plenty of power. For those who love the rich, seductive sounds of vintage alnico guitar speakers but looking for a different flavour, this 'crème de la tone" downloadable DSR is the perfect choice. The Celestion Cream brings a glorious, laid-back attack, exuding the same warm lows and brilliant bell-like chime. It delivers smooth and organic mids, that compress just right when pushed hard, but there's something more. The Cream has a midrange that is further characterised by a fine-grained detail adding a high-definition quality to the vocal range, yielding more expressiveness than was ever thought possible. It's the unmistakable sound of Celestion's legendary Alnico speakers taken to the next level.

The Dynamic Speaker Response (DSR) files for the Celestion Cream series are available individually or as a complete set. Explore the full range of sounds for this classic speaker, at a considerable saving over buying the individual files. The Celestion Cream DSR set includes five cabinet configurations: 1×12 (both open and closed back), 2×12 (both open and closed back) and 4×12 (closed back).

As a host program for the new Celestion Cream and the entire line of Celestion DSRs, SpeakerMix Pro presents the genuine next-generation virtual speaker solution. More than just a top-level IR loader and convolution engine for hosting impulse responses--it offers pristine sound, mixes up to six channels of different IRs into a stereo or mono track and even fixes IR sample rate/project mismatches.

With SpeakerMix Pro, users can:

- Discover Celestion's proprietary Dynamic Speaker Responses (DSRs), the next generation in Impulse Response technology that capture the sound and feel of the speaker's dynamic, non-linear response for even more detail and realism.
- Integrate their personal library of Celestion and third-party Impulse Responses to make the most of the tones they already own. SpeakerMix Pro

Celestion Debuts the Cream DSRs

Tuesday, 31 May 2022 18:43

uses its unique DSR algorithm to make existing IRs more dynamic sounding, enhancing their tone with even greater feel.

- Incorporate Celestion's superb room responses (or add your own) into your mix for an authentic 'live' sound. Add room delay for further 'depth' and 'size'.
- Deploy the unique Z-curve function to closely model the dynamic electrical coupling between amp and speaker.
- Fine-tune the mic position, enabling the user to adjust the position of the microphone across the speaker until they've found the tone that's just-right (DSR-specific functionality).

SpeakerMix Pro automatically installs with 10 free DSR speaker cabinets curated to give users a broad tone experience across the Celestion range of guitar and bass speakers.. Simply purchase the full version of SpeakerMix Pro and select 10 free DSR cabs (choose the preferred DSRs from the available range on the first website below during upgrade).

All of Celestion's Dynamic Speaker Responses and SpeakerMix Pro plugin are available for VST, AU and AAX compatible DAWs.
