

Arturia Filter MS-20

Filter MS-20 extracts the sonic character from an iconic instrument, with an edgy sound championed by The Chemical Brothers, Aphex Twin, Daft Punk, and countless others, and distills it into an enhanced go-to effect for creative mixing and radical sound exploration: make anything sound massive.

Sculpt your sounds with the same howling filter sweeps, crushing bass, and wild distortion that put Filter MS-20's namesake synth on the map. Filter MS-20 lets you modulate and animate its virtual circuitry, reroute its filter and distortion sections, and explode the stereo width of any sound thanks to modernized features. Energize any sound in seconds with a knob-per-function interface, macro-style controls for quick sweeping changes, and deep sound design controls just a click away. Filter MS-20's sound is famous for French house, industrial metal, techno, and beyond. With its crunchy, powerful, ultra-fat sound in your DAW, you can decide what's next.

All users can enjoy the gnarly character of Filter MS-20 for free from Tuesday December 20th, 6PM CET until January 2nd, when it will return to a full price of 99€/\$. The plugin will be available for download on the Arturia Software Center and the website below.
