Acoustic 370 amp model, or stand out like Flea with the warm punchy tone of an Ampeg SVT. The MS-60B+ faithfully reproduces 11 classic amps and cabinets using Zoom's Multi-layer IR technology.

Transform your sound with 75 effects that span from octaves, filters, modulations, synths, drives and more. Mix and match up to 6 effects, amp models, and preamps to build the perfect bass rig. Or, explore the history of bass with 85 presets based on famous songs from the 60's to today. The MS-60B+ allows you to output split signals. This allows you to output sound with Amps/IR's to a PA, while simultaneously outputting sound without Amps/IR's to your amplifier.

The MS-60B+ is designed with new analog circuits that provide more fidelity for improved sound quality. The flat phase response provides sharp attacks and clean low end, giving the pedal more refined tonal characteristics. With USB MIDI, you can connect the MS-60B+ to other MIDI gear to remotely trigger patch changes. The LCD backlight changes color to make it easier to distinguish each category of effects while scrolling.

Fine-tuning and adjusting amp models and effects can be done with the four encoder knobs. The Cross Key switches allow you to easily switch between effects and patches with a tap of your foot. The onboard chromatic tuner uses the color backlight to give visual feedback to help you tune quickly and accurately. It supports all standard bass guitar tunings, including drop tunings. With a growing library of patches and effects, bass players can continue to expand their sound with the Handy Guitar Lab for MS-60B+ app for iOS.
