Professional producer and seller of content for all guitar and bass digital devices ChopTones introduces Vocs MV BM as its inaugural guitar amp plug-in - duly designed to recreate the one-of-a-kind tone of the MV50 Brian May guitar amp head, itself the result of a close collaboration between a certain iconic British brand of amplification and acclaimed British rock royalty, by leveraging cutting-edge neural networking technology to capture the essence and nuance of the original hardware with unparalleled accuracy - as of April 30...
