

EVE Audio SC3010 & SC3012

The professional high-end end studio monitor manufacturer EVE Audio from Berlin, Germany upgrades their main monitors SC3010 and SC3012 with a new generation of highly sophisticated 10" or respectively 12" double coated low resonance metal diaphragm woofer.

These woofers enhance the reproduction of low frequencies with exceptional accuracy and dynamism to 29Hz or rather 25 Hz, enable SC3010 and SC3012 to serve as main monitors without the necessity of an additional subwoofer. The amplifier section features new filter adjustments, with a total amplifier output power of 1300 W transforming them into true powerhouses in studio monitoring. This new silver aluminum woofer membrane is visually striking, accentuating the exceptional reproduction quality of the SC3010 and SC3012.

EVE Audio Main Monitors SC3010 and SC3012 with Facelift

Saturday, 08 June 2024 19:00

either horizontally or vertically.
