Adamson Lake Library V6.0

Adamson Systems Engineering has launched Lake Library V6.0, delivering improvements designed to elevate system performance and simplify user workflow. This latest release introduces unified phase matching across products, ensuring seamless integration and compatibility, alongside a range of other significant updates.

Key Highlights include:

- Enhanced Linear Phase Presets: All existing linear phase presets have been meticulously revised
- New Linear Phase Presets for all passive S-Series and IS-Series point sources
- IS7c Presets
- Revised Limiter in all NH4 high frequency presets for better performance

"By utilizing the new Lake XP modules, we unlocked a vast array of features. With this update, we're proud to deliver the results of years of research. I'm confident our users will appreciate the new presets and the streamlined workflow."." - Mario Ahrberg, Head of Applications EMEA

Additional updates include:

- Optimized 60 Hz Subwoofer Presets: Specifically designed for use in

combination with VGt, E15, and E12, enhancing low-end performance.
- Streamlined User Experience: A new folder structure and Amplification Chart make it easier than ever to access and apply presets. For a comprehensive list of updates, refer to the Release Notes included in the download package.
