Minimoog yet as aggressive and snarling as the MS20. It strikes the perfect balance between these two icons, making it an incredibly versatile tool in any producer's arsenal. Whether you're conjuring deep bass lines or soaring leads or looking for something a little extra special, the Oberheim OB-1 is your ultimate ally in the studio. Join the rebellion against mundane sounds and bring balance to your music with the timeless strength of the OB-1. Let the OB-1 guide your sonic journey like a true master.

The GForce Oberheim OB-1 emulation has been richly enhanced to bring the best of both worlds - vintage charm aligned with modern possibilities. Here are the key enhancements:

- Enhanced Signal Path: The OB-1 retains the authentic, rich tones of the original while benefiting from a new waveform alongside waveshape modulation, discreet level for the oscillators, sub and noise, LFO sync & retrig, Envelope looping, discreet key tracking, cross-mod, pan spread and more.
- Polyphony up to 16 Voices and Unison: Unlike the monophonic original, we've added polyphony and mono unison.
- X-Modifier: Unlocks unparalleled creative possibilities by enabling direct modulation of most parameters, transforming your sonic landscape with ease.
- High Pass Filter: This addition allows for more precise control over the frequency spectrum, enabling cleaner mixes and more intricate sound design.
- Chorus, Delay, and Reverb Effects: Integrated effects expand the sonic palette, allowing for lush, atmospheric, and dynamic soundscapes.
- Four Versatile Macros: These provide real-time control over key parameters, enhancing expressive performance and sound customization. Macro4 can be modulated by the sequencer. This can get very creative.
- Built-in Arpeggiator and Sequencer: These tools make it easy to create dynamic rhythmic and melodic patterns, adding depth and complexity to your music. The sequencer features individual step length and probability, as well as a track dedicated to sequencing Macro4.
- Advanced Patch Browser: Quickly find and customize the perfect sound from a vast preset library, streamlining the creative process.

These enhancements ensure that Oberheim OB-1 is not just a nostalgic homage, but a powerful and versatile musical instrument.

The hardware Oberheim OB-1 holds a special place in the history of synthesizers. Launched in 1978, it was the world's first programmable monophonic synthesizer. Designed by Tom Oberheim, this revolutionary instrument brought the power of preset memory to the world of analogue synthesis, allowing musicians to store and recall their unique sounds with relative ease. Despite its groundbreaking features and historical significance, the OB-1 has remained somewhat under the radar compared to other classic synthesizers like the Minimoog. However, those who have Dienstag, 09. Juli 2024 23:00

experienced its capabilities know that the OB-1 is a true gem.

Using a unique X-Modifier technology, the scope of sound modulation possibilities is immense. The intuitive X-LFO and X-ADSR section enables you to work faster without having to set up modulation paths; they are already set up for you. X-Mods provide you with the ability to create extensive modulations of almost every parameter, allowing you to create hugely complex, yet musical, sounds. So, while the tone and character at the heart of the synth remain authentic to the original, the additional features turn it into a true sonic canvas.

The GForce Oberheim OB-1, with its fully resizable UI, powerful Preset Browser, and over 300 brand-new production-ready presets from top-level sound designers, is fully ready to inspire your future musical ideas. Oberheim OB-1 features the aforementioned preset browser, giving you the power to organise your sounds in a way that suits your workflow. With extensive tagging, sorting and search possibilities, it's quick and easy to find the presets you want. Gforce have enlisted an array of diverse sound designers and artists including Zardonic, An On a Blast, Alex Jann, Jogging House, Lightbath, Polydata, Plug Hugger, GEOsynth, Jordan Passmore, Paul K Hurst, Richard Veenstra and Ramon Kerstens (K/V), Koryu, Boudicca Bass Service, Dave Spiers, Graeme Rawson and more. The patches span from edgy and modern to passionately classic, featuring many recreations you'd expect from GForce.
