

# Slate Digital SUBMERGE

Slate Digital unveils SUBMERGE, the latest plugin to join the ever-expanding All Access Pass and Complete Access Bundle subscriptions. Submerge is an advanced automatic sidechain plugin that is designed to create unique, exciting ducking and pumping effects. Traditionally achieved by compressing one sound using another sound as a trigger, Submerge gives you even more control over the shape and depth of your affected sound without needing to set up a compressor sidechain in your DAW.

Submerge features three Trigger modes and eight onboard effects that expand the creative possibilities beyond what is possible when using traditional processes. The plugin also features customizable control curves and sample rate reduction effects for frequency-selective ducking and sound design applications. As this production technique increases in popularity, Submerge is an incredibly flexible sound design tool that any producer should have in their toolkit. Submerge is available now for All Access Pass and Complete Access Bundle subscribers. It can also be purchased as a perpetual license for \$49.

The Slate Digital All Access Pass features dozens of award-winning plugins like MetaTune and Murda Melodies, in addition to third-party offerings from Kilohearts and Sonic Academy like Multipass and the ANA 2 Ultra Bundle. It also includes access to the VIRTU web-based assisted mastering platform, as well as hours of video masterclasses via Slate Academy, pro mix templates for all major DAWs, and over 20 GB of unique royalty-free samples.

The Complete Access Bundle brings together Slate Digital's All Access Pass and Solid State Logic's SSL Complete plugin subscription packages. Boasting over 100+ pro plugins from Slate Digital, SSL and Harrison Audio, plus numerous additional resources and third-party offerings, the Complete Access Bundle is the most comprehensive plugin subscription currently available. Head to Slate Digital's website to learn more.
