

Waldorf Synthesizer Blofeld Plug-in

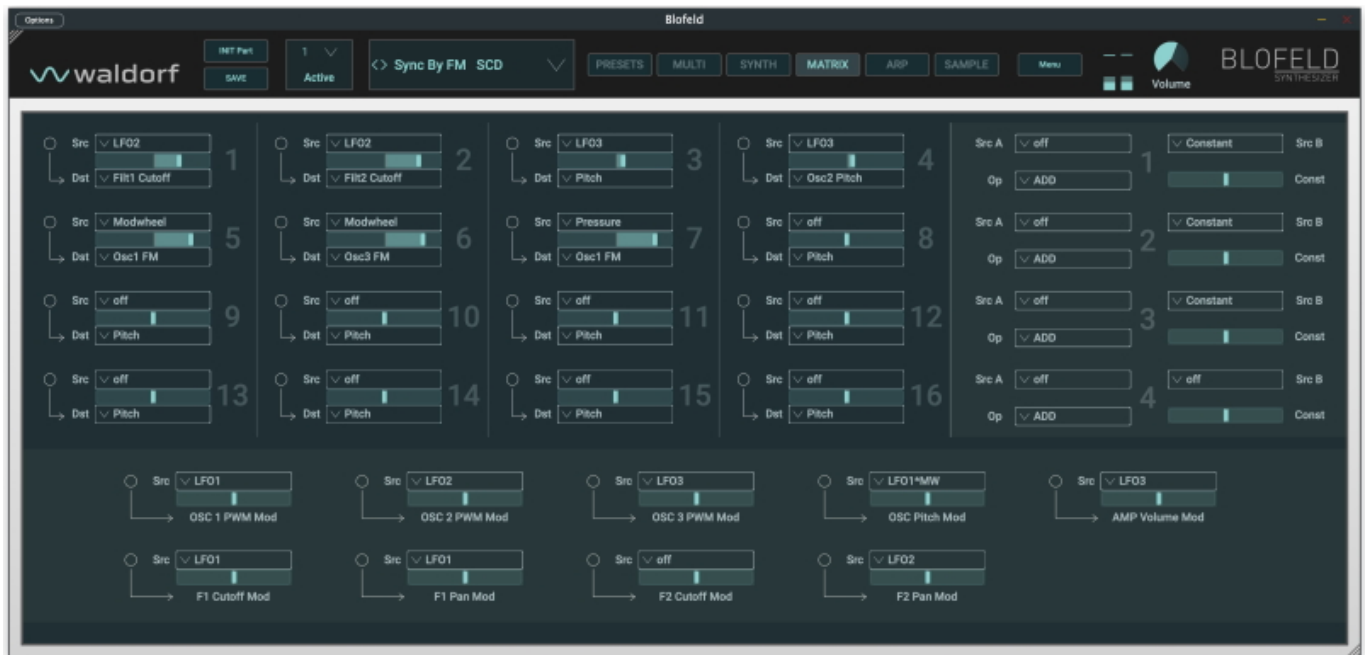

Blofeld expands its power: The versatile and most popular Waldorf synthesizer classic Blofeld is now also available as a software instrument. The original Blofeld hardware can be controlled by the plug-in. The sound generation of the Blofeld plug-in delivers the typical fat and rich Waldorf sound character that so many Waldorf users worldwide love when they are playing their Blofeld, Q, Q+, Microwave, Microwave II/XT or even the flagship, the Wave. The secret of its sound is a powerful wavetable engine that enables these intense and expressive sounds. This unique synthesis system is based on the revolutionary PPG synthesizers of the early 80s. The Blofeld sound remembers those edgy, assertive or bell-like timbres that have been an integral part of countless worldwide hits since the PPG era.

The 'Synth' section contains all the important parameters for the sound design, giving access to the oscillators, wavetables, filters, envelopes, LFOs and effects. The modulation matrix offers 16 freely assignable connections in addition to 9 fixed predefined routings. Additionally 4 freely assignable 'modifiers' are available that enable mathematical operations which can be used as a modulation source.

The Blofeld plug-in has a powerful preset browser with a database structure and is offering extensive sorting and filter functions. The arpeggiator of the Blofeld is one of the most powerful ones to be found in a Waldorf synthesizer. In addition to 15 basic patterns, it offers a complex pattern editor for creating own variations. This feature makes it a powerful tool.

Like the hardware, the plug-in also features a 16 part multimode. The MIDI channel, velocity and keyboard zone can be set individually for each part. This multimode allows the creation of complex layer sounds. The sample browser provides an overview of the imported and available wavesets. Users can also load their own samples and assign them to the oscillators.

The Blofeld plug-in is available as VST, VST3, AU and AAX for macOS and Windows through Waldorf Music's growing global network of distributors at an price of 149,00 € - and also directly from Waldorf Music's online shop.
